Language usage in comedian routines is heavily influenced by demographics.

In stand-up comedy, a comedian’s jokes reflect their identity. This concept of identity can appear in the form of demographics, such as race and gender. We analyzed various routines of comedians, and discovered relationships with respect to generation, gender, and race/ethnicity. Those relationships yield remarkable information about the words that those demographics use, and gives us insight on the effect that a comedian’s background has on their routines.
